

Handy guide to travelling NSW

LOOKING to pack up, hitch up and hit the road to the east this year? If so, make sure you take a look at the Caravan and Camping Holiday Guide 2017.

“The popularity of caravan and camping holidays continues to grow, and this guide can help you plan your next perfect trip in NSW,” said Caravan and Camping Industry Association (CCIA) NSW chief executive

Lyndel Gray. “The guide provides a whole range of accommodation options, from campsites, family and pet-friendly holiday parks to luxury glamping and cabin options, so there is something for any budget or level of luxury.”

There is information on more than 350 CCIA member holiday parks, as well as 200 dealerships and suppliers selling all the latest products and

equipment, plus details on where to get your RV serviced or repaired.

“Each year, more than 3.9 million caravan and camping trips are taken in NSW, and this free resource – available as a hard copy, online or as a downloadable app – is the best way to locate your perfect holiday park or product supplier,” Ms Gray said.

Dump point for caravanners

■ Glenn Cordingley

It may not sound too glamorous but a new dump point for Broome will mean the world to hundreds of people travelling to town each year in recreational vehicles and large caravans.

Tourism WA has offered to share the \$45,000 cost with the Shire of Broome and the Campervan and Motorhome Club of Australia would provide infrastructure and directional signage.

It would be situated behind the Broome Visitor Centre in Chinatown, alongside the existing caravan parking bays.

How the cost would be split was under negotiation but the council could be required to contribute a

maximum \$22,500. Wastewater dump points are public facilities that receive wastewater and liquid waste from caravans and other vehicles with mobile toilet and sanitation fixtures.

The entry point of a wastewater dump point often consists of a receptacle, which allows users to connect or empty their storage tank. The wastewater flows into holding tanks or reticulated sewer.

The disposal of effluent from caravans and other vehicles with mobile toilet and sanitation fixtures is not permitted because it would interfere with the efficient operation of a conventional on-site wastewater disposal system.

The BVC would assist in managing the facility.
